(54) Title: CUTTER APPARATUS

(57) Abstract: Cutter apparatus comprises a maneuverable body having an upper part (10) adapted for control and a lower part (11) in the form of a horse shoe shaped slider. The parts are connected by a ploughshare shaped blade holder (13) which is attached to the lower part (11) and extends into the upper part to present a cutting edge (15) towards the direction of motion of the body. Protrusions (17, 18) are provided on a lower face of the upper part (10) to guide paper between the parts and present and tension the paper to the cutting edge (15). Nouches (19, 20) in the lower part (11) enable the body to follow a straight edge or template.
